Support localization workflow for the Requests documentation

Feature Request:

The Requests documentation could benefit from a structured localization workflow using Crowdin, GitHub workflows, and Sphinx gettext output.

Build Context:

```
pip install . -r docs/requirements.txt
sphinx-build -b html -D language=${LANGUAGE} \
    -D locale_dirs=locale -D gettext_compact=0 \
```

```
    docs docs/_build/${LANGUAGE}
```

Expected Behavior:

A clear and maintainable localization workflow allowing .po files to be reused and synchronized.

Requirements:

1. Review the proposed localization workflow
2. Identify Sphinx gettext configuration needs
3. Determine .po file placement
4. Verify localized builds don't break existing docs
5. Document the workflow for contributors
